Communication Drill

Robert Ljunggren

This drill is designed to improve verbal communication skills.

Cost of Drill: \$ (about \$20)

Time Required: 60 to 90 minutes

Teaching Points

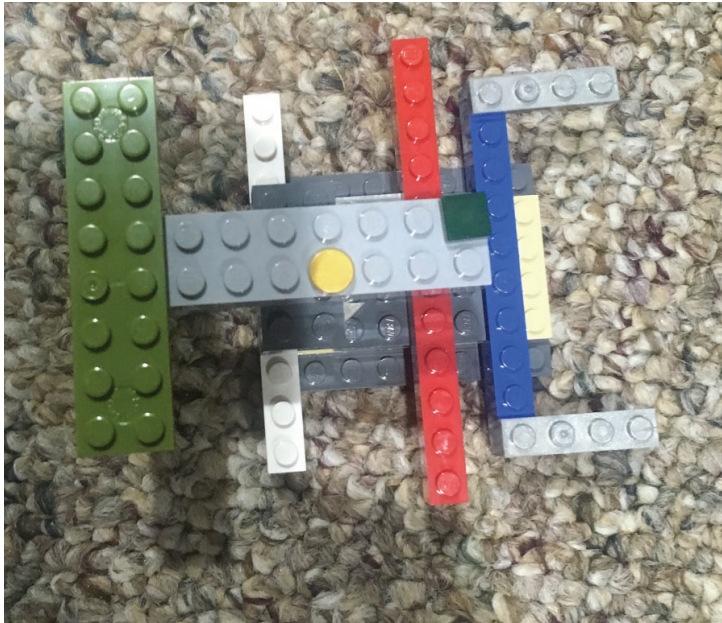

Communicating to others and describing what you see down range

Materials List

- 1 box of LEGOS
- A two-way radio or pad of paper to send notes

Setup Directions

Make a LEGO model using 15 to 20 pieces. Supply the same pieces in a small sandwich bag.

What Should Happen During the Drill

One participant will look at the model and try to explain how to make the same thing to the rest of the crew. This will help others understand how important it is to paint a good picture of what you see at an incident.

Comments

I have used this drill several times, and it is always an eye-opener watching it play out.
